SUMMARY

Systems engineer turned AI solutions builder who ships production products end-to-end by directing modern AI development tools. Designed, scoped, and delivered a full SaaS product and growth platform — front end, API, database, and go-to-market — as a self-directed build. Four years of infrastructure engineering (server, virtualization, storage, security hardening) underneath, so solutions are built to actually deploy, integrate, and run. Seeking a forward-deployed / applied-AI role: sit with a real problem and build the working solution.

CORE SKILLS

AI Building & Delivery: AI-directed development (Claude Code / agentic tooling), rapid prototyping to production, prompt engineering, solution scoping, product spec, technical QA of AI-generated code

Product & Growth: end-to-end product delivery, conversion-focused tooling, SEO strategy, landing-page systems, lead capture, A2P/SMS compliance

Infrastructure: Windows Server (2008–2022), Linux/Unix, virtualization platforms, storage, WSUS, server hardening, monitoring & incident response

Stack Fluency (as builder/director): React, TypeScript, Node/Express, PostgreSQL, REST APIs, Git/GitHub, Vercel — reads, explains, and modifies the full codebase

Solution Design: evaluating options for technical and business suitability, integration planning, documentation

EXPERIENCE

Founder & AI Solutions Builder — TaskBuild (Independent)

2024 – Present

Conceived and single-handedly directed the end-to-end build of a production SaaS product for home-service businesses, using AI development tooling as the engineering team. Owned product scope, architecture decisions, growth strategy, and quality.

- Shipped a **production web application** (React + TypeScript front end, Express API, PostgreSQL/Neon via Drizzle ORM, deployed on Vercel) across **~115 source modules and 170+ commits** — an active, sustained shipping cadence.
- Designed and delivered a **suite of 10+ interactive business calculators** (AI-hire ROI, customer lifetime value, crew capacity, missed-revenue index, true-rate, review-impact, business health score, pricebook builder) — each real, working logic used as lead-generation assets.
- Built the **growth engine**: SEO-optimized industry and landing pages, a blog system, an AI prompt library, and a published research report — and diagnosed/fixed an internal-linking issue that was suppressing search ranking.
- Implemented **A2P/SMS compliance** (consent capture and opt-in flow) and a lead-capture + transactional-email pipeline — regulatory and operational detail most builds skip.
- Ran **technical QA on AI-generated code and infrastructure**, catching production blockers including missing environment configuration and webhook secrets before release.
- Produced a full **brand system** and a customer research survey instrument to inform the roadmap.

NOC Associate — Network Operations

Mar 2024 – Present

- Monitor, triage, and respond to incidents across production infrastructure; escalate and coordinate resolution to maintain uptime and service reliability.

Systems Engineer — Mercy Ships

2021 – 2023

- Identified and assessed solution options for both technical **and** business suitability across IT infrastructure.
- Designed and implemented infrastructure solutions spanning servers, storage, and virtualization platforms.
- Administered Windows Server (2008–2019) and Linux/Unix systems.
- Partnered with IS staff to ensure technical compatibility and effective system integration.
- Implemented and evaluated trials/prototypes from concept documentation; deployed and tested production infrastructure from approved designs.
- Monitored, maintained, and troubleshooted infrastructure issues.

Junior Systems Engineer — Mercy Ships

2019 – 2021

- Built improved technical documentation for the organization and future engineers.
- Collaborated on the WSUS patch-management environment.
- Worked with the security team to harden server infrastructure and maintain a secure server environment.

EDUCATION & CERTIFICATIONS

Information Technology Systems Administration — Certification · MyComputerCareer · 2019

Certifications: Microsoft Azure Fundamentals (AZ-900) · CompTIA Server+ · LPI Linux Essentials

SELECTED PROJECT

TaskBuild — production SaaS + growth platform, designed and built solo by directing AI. Overview: jw-portfolio-2.vercel.app
